### About MEISER

Meiser is a world leading manufacturer of open bar grating, profile planking, stair-treads and handrail, supplying its products to all market sectors. The diverse range of products are manufactured in a variety of different materials, for example mild/ stainless steel, aluminium and GRP. The company's products are supplied globally and are used in some of the world's most harsh environments, such as Oil & Gas, Petro-Chemical, Power Stations, Water Treatment Plants etc.

All products are internationally approved and manufactured under ISO 9001:2008 and can be supplied with all necessary QA and CE certification when requested.

The diverse range of products enables us to offer the complete package, tailored to your project specific requirements and can be enhanced with project management, onsite surveying and detailing services as necessary.

### MEISER press-welded grating

Press-welded grating are characterised by the high stability of the respective grating. In this process, all intersection points are welded together, and these give the grating a high degree of torsional rigidity, even when overloaded. Press-welded grating can also be manufactured with a slip resistance class of R10 to R12, and are frequently used in conveying levels, painting lines and plants. Tried-and-tested mesh widths ensure that drop-through protection is guaranteed for various small objects, e.g. 15, 20 & 35mm ballproof.

### MEISER Press Locked grating

Press-locked grating is frequently used in applications or areas with particularly high requirements for aesthetics or for its slip-resistant properties. These can be manufactured with a slip resistance class of R10 to R13, and because many different mesh spacings can be manufactured, drop through protection for various small parts can be guaranteed whilst ensuring compatibility with sprinkler systems for levels located below.

## MEISER sheet metal profile "Stepbloc F"

MEISER "Stepbloc F" has for many years had an established place as a platform flooring in the automotive industry. The punched pattern of the very prominent surface gives this grating excellent stability which guarantees a high degree of slip resistance, particularly in areas where the work areas could involve grease or oil contamination.

## MEISER sheet metal profile "Steplarm G"

MEISER "Steplarm G" has a surface structure which is comparable to a chequer plate, making this product an attractive lightweight alternative, but greater load-bearing capacity at higher span widths. A closed surface floor that has proven itself for use in public areas with pedestrian traffic and in commercial use in the construction industry.
